#### **Door lock with new design and optics variety**

FAWO, the leading European system supplier of technical equipment for caravans and mobile homes convinces with a design technical innovation for the event of the CARAVAN SALON 2008: the think tank from Nieder-Olm has enlarged its supply of outer parts of door locks and encapsulates it in a new product line. Due to their circular appearance the newcomers have been called *DOT*.

The previous design elements by FAWO in the outer area of door locks have been square, elliptical or semi-elliptical and the new optics generation of the system developer is circular. Now there are different possibilities for the mix of material. For the individual components of the door lock can both consist of high-quality plastic and metal (Zamak, a zinc alloy with a base metal of zinc and alloying elements of aluminium, magnesium and copper) and can arbitrarily be combined with each other. Furthermore the colour can be chosen freely and thus FAWO offers the biggest optics variety possible for one single product.

However, other aspects stay the same: FAWO puts very high claims to its products, both to the quality of the materials and to a precise production. And of course the new outer part of the door lock can be adapted to all existing locking systems.
