

PRESS RELEASE

Light – playing perfectly to the crowd!

New revolutionary lighting system the mobile living environment

Scenario-Light-System, in short SLS, is the name of the new generation of extremely comfortable light control in the latest technical design and high-class quality. The innovative lighting management – a partnership co-production of the system developer *FAWO* and the technology company *ABL SURSUM* – regulates brightness and sets light scenarios for the different uses in caravans and motor homes.

Several lights can thus be combined in meaningful combinations and the individual light values of these individual groups can be programmed and saved as lighting settings. It adjusts the mobile living environment to the personal daily routine, wishes and needs of its occupants and guarantees always the best possible light arrangement.

The intelligent SLS for scenographic lighting and lighting effects consist of dimmers, an electronic central control and secondary control sections. In total there are nine channels/pools of light/light circuits. The central main panel can control all electrics via function buttons is located in the entrance.

From there for example you can turn on a coming home light where only certain lights are switched on to create a cosy home atmosphere or to not disturb the sleeping children. When leaving the vehicle all electrics can be switched off by a single button. A luxury which nowadays is offered by every good hotel. Energy saving and at the same time reassuring that all lights and electrical equipment are switched off – except the fridge of course.

In addition the high-quality Scenario-Light-System offers the installation of several sub panels. They can be located in the sleeping area and living area and operate individually pre-programmed lighting scenarios. The function buttons of the panels are not labelled but have symbols on them assuring easy handling - even for children.

The first SLS generation of the efficient innovation alliance between *FAWO* and *ABL SURSUM* were still exclusively installed in original equipment manufacturer quality in motor home living environments by *Hymer*. Caravan customers of the *Knaus-Tabbert-Group* could experience the second generation up close. The descendants of this high tech light creation can be found amongst others in the current *high-quality motor homes by Vario-Mobil* – realised in technical perfection and scenically motivated.

These new *SLS* light control elements of the third generation not only present themselves super flat but also with non-contact switching technology. To activate the function buttons no longer requires any physical contact. Furthermore their

symbols only light up when you approach them with your finger.
Just brilliant: at night no unwanted light sources disturb your
sleep.
