Up and down always lively

CATCH - the proven height adjustable single column table frame with a new design

In cooperation with the leading hardware manufacturer *Kesseböhmer*, FAWO has developed the height adjustable single column lift tables further. The resulting new model range is modern, visually appealing and considerably less expensive than its predecessors. The CATCH impresses with its functionality, simple operation, solid technology, proven stability and blends harmoniously into the world of mobile home furnishings.

For lowering, actuate the ergonomically shaped, flat release lever on the underside of the table top and the table can be lowered with slight pressure, without jerking and tilting. Raising is done automatically by pressing a button - the integrated pneumatic spring offers the necessary support. The release lever can be placed anywhere on the underside of the table top and thus provides the desired ease of use.

The technology of the single column lifting table frame was taken over from the area of office ergonomics technology which has proven itself for many years in hard office life.

The furnishing scheme has also been revised. In addition to the height adjustable basic version, either bolted to the vehicle floor or freestanding, there is a version with table top slider with which the table top can be easily and almost silently moved in

any direction. Two lateral locking levers provide the necessary support in every position. If more space is needed, there is another version with a table top swivel fitting with which the table top can be easily swung to the side.

In terms of colour, the CATCH adapts to the wishes of every customer and impresses in the basic version with an elegant anthracite grey design.
